

SPRINGTIME SPECIALS

MH 010 1" TRANSFER PUMP

Lightweight
 Honda 4 stroke
 130L/min

\$535.00*

MINIBLAZE FIREKIT

2.5hp motor & firefighting pump
 5m delivery hose
 2.5m suction hose

Versatile
Compact *Portable*

\$660.00*

*All fittings included as shown.
 All fittings supplied for hook onto tank.

DOUBLE SIDED SHROUDED BOOM

Spray drift pose a problem?
 Sensitive crop to spray under?

*Adjustable width from 2.3 metres
 up to 3 metres*

*Also available in a single sided
 shroud*

\$1550.00*

FIRES-COUT - BE FIRE READY

\$4300.00*

Built tough, the FireScout is the ultimate water source for infield emergencies, back burning or general water supply to remote areas.

Featuring ; UV stabilised chemical resistant polyethylene tank, galvanised forklift pockets and moulded lifting tie down handles, heavy duty 36mx19mm AS1221 rated fire hose with adjustable nozzle, Aussie FireChief Pump with 5 year warranty, genuine Gx160 6.5HP Honda Engine with 3 year warranty, 3 way regulator and gauge gives you a spare outlet for boom attachment and easy access suction filter with auto shut off for easy cleaning and draining.

HYDRAFLUME IRRIGATION PIPE

Hydraflume provides a cost effective way of irrigating in various crop situations. With easy handling and minimal maintenance, it is available in sizes from 6" up to 12" and roll lengths of 100 or 200 meters.

We also stock a range of elbows, joiners, tees, clamps and various size cups to suit your individual requirements.

*Prices start from
 \$88.00* for 100m
 roll of 6" fluming.*

MULTI FUNCTION WEATHER STATION

FULL COLOUR screen, measures temperature, humidity and moon phases, calendar with clock and alarm function. Wall mount or table stand. 240V cable supplied.

\$75.00*

RAIN GAUGE 250mm

The rains are coming!

Replace that old gauge before they get here.

\$17.00*

FELCO PRUNING SAWS

**Grab them quick!!
 Only while stocks last**

**From
 \$46.00***

The Campbell Street Agricentre will no longer be open on Saturday mornings. The Bourbong Street store is open from 8am - 11am, excluding public holidays.

ORIUS® 430 SC FUNGICIDE

(430 g/L tebuconazole)

- Controls orange rust on sugar cane.
- Tebuconazole is a systematic action that can work to prevent and eradicate fungi.
- Eliminates fungi by inhibiting their ability to spread spores, which slows growth.

10L
\$252.88

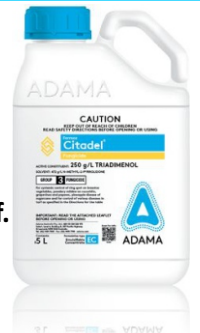

ADAMA

CITADEL®

(250 g/L Triadimenol)

- Systematic control of powdery mildew on cucurbits, pineapple disease of sugarcane and for control of various diseases in turf.

\$252.00

MANNI-PLEX® RANGE

Foliar feeding is one of the most efficient ways to supply nutrition to tree and vegetable crops during critical seasonal stages such as flowering, early development and crop bulking. This ensures key elements at crucial growth stages. Applying nutrition to plant leaves allows the plant to immediately absorb nutrients which promotes better plant uptake, better overall plant health and increased yield potential.

The proprietary technology used in MANNI-PLEX is designed to enhance the absorption of nutrients through the leaf and enhance nutrient mobility and translocation through the plant phloem to plant growing points.

- Manni-Plex supplies readily available nutrients to the plant that are immediately available for uptake.
- Sugar alcohol technology for systemic translocation of nutrients within plants.
- Wetting and spreading formulation for greater leaf area coverage.
- Rapid nutrient deficiency correction.
- Can be combined with compatible pesticides and other fertilisers to improve overall performance.

The BRANDT MANNI-PLEX Range

*Bundle *Boron *Cal-Mag *Calcium *Foundation *Iron *Manganese *Magnesium *Moly *Potassium *Zinc

LUNA SENSATION

A NOVEL APPROACH TO DISEASE CONTROL IN TROPICAL TREE CROPS

Tropical tree crops such as avocados are no stranger to fungal attacks. Crop losses due to disease cause significant financial impact for the farmer.

Fortunately, help is at hand in the form of novel fungicide options to control certain diseases. Bayer CropScience Australia recently launched Luna Sensation® into the tropical tree crop segment. The product is a combination of 2 fungicides, namely Fluopyram (group 7) and Trifloxystrobin (group 11). Luna Sensation claims activity against Anthracnose and the stem end rots in Avocados (as per image 1), Mangoes and other tropical tree fruit crops. Further to this, the product also has activity against a range of spot-forming diseases in Lychees and Papayas.

The combination of Fluopyram and Trifloxystrobin has systemic properties, which means the active ingredients can translocate from application point to the extremities of the tree. This can be helpful where challenging spray coverage conditions prevail with large and dense tree canopies.

Rainfastness of this product is claimed to be four hours, which stem from the fact that the active ingredients are mobile in the plant shortly after application. Luna Sensation claims to be “soft” on pollinating insects, therefore spraying of the trees during flowering should not cause disruption of beneficial insect populations.

It is advised to apply Luna Sensation as an early cover spray to prevent disease flare-ups later in the season. The product label for Luna Sensation is comprehensive and covers a range of application scenarios for a variety of tropical tree crops. It is important to remember not to exceed a total amount of 2 litres product per hectare per year. The key is to incorporate Luna Sensation into a well-planned spray program, consisting of a range of products from different chemical groups.

KOCIDE® BLUE XTRA

Kocide Blue Xtra (350g/kg copper (Cu) present as Cupric hydroxide) is an easy to use copper fungicide for protection against fungal and bacterial diseases in vegetables, fruit and many other crops.

Kocide Blue Xtra controls a wide range of fruit and vegetable diseases such as: Anthracnose in avocados, macadamias and mangoes. Phytophthora stem canker in avocados, citrus and macadamias. Black Spot, Melanose, Smoky Blotch and scab in citrus crops. Parasitic algae in Lychees. Husk spot in macadamias. Bacterial black spot in mangoes.

Kocide Blue Xtra can also be applied to capsicums, cucurbits and tomatoes for a range of disease control such as common blight and halo blight.
