 Various sizes
 32 - 80 mesh strainer
 Prices start from \$19.50*

NITROPHOSKA® PRODUCT UPDATE: Same Great Product, New Colour

Nitrophoska® Special

Uniform delivery of balanced
nutrition with rapid uptake...

Nitrophoska® Special is changing in colour from white to light red. Incitec Pivot is still sourcing the high quality NPK granule from Antwerp, Belgium and all other ingredients remain the same. This change is a result of the inclusion of Iron Oxide in the manufacturing process.

Nitrophoska® Special is a versatile compound NPKS fertiliser. It provides uniform delivery of targeted, balanced nutrition to maximise yield potential and quality in **tree, vine and vegetable crops as well as sugar cane**. Nitrophoska® Special also promotes vigour in floriculture ornamental plants and turf.

BALANCED NUTRITION IN EVERY GRANULE

Each granule contains all the nutrients in Nitrophoska® Special, improving the uniformity of nutrient distribution in crops and reducing issues with nutrient segregation during transport or application. Nitrophoska® Special also contains calcium (Ca), as well as traces of copper (Cu), iron (Fe), manganese (Mn) and molybdenum (Mo).

The **SUNFAM AGRICENTRE** has stock of Nitrophoska® Special in 25kg and 1 tonne bags.

GRAZON® EXTRA HERBICIDE

Grazon® Extra offers outstanding knockdown and residual weed control

Grazon® Extra is the premium control option for foliar applications on hard-to-kill noxious weeds in fallow situations in Northern Australia. It contains three active ingredients (300g/L triclopyr; 100g/L picloram; 8g/L aminopyralid), offering control of the broadest list of weeds in a single product on the market. It controls the target weeds without harming pasture grasses.

Grazon® Extra acts on both foliage and roots to provide rapid brownout of leaves, dry down of stems and destruction of the root mass to prevent regrowth. The ingredients remain active in the soil to prevent seeds of the target woody plants and secondary weeds from germinating for many months after application (in some cases up to two years).

Available now in 20L drums.

CROPLANDS TREE CROP SPRAYERS

The **Quantum Mist Ultra Tower** (pictured) effectively applies the chemical to the orchard so coverage is even and accurate, using a vertical boom. It allows you to cover ground faster, saving time and reducing fuel costs compared to traditional air blast technology.

The **Cropliner XL** with the DSV fan is an effective sprayer with minimal noise and maximum air velocity. The standard unit has a shroud which provides excellent coverage on trees up to 10m tall.

The new **Cropliner Airblast Tall Tree Sprayer** has a specialised shroud that can effectively spray trees up to 14m tall. With its DSV fan, it looks similar to the conventional air blast sprayers but has the added advantage of getting chemical 30% higher.
